positive lock door system for
safety when door is closed

Patented 360° full length
intermeshing hinge

Liberty Caregiver Doors are one of the more unique solutions to water management in the shower zone for consumers with special needs and potentially a key benefit if a caregiver is involved with the showering experience.

The Liberty Caregiver Door System allows a consumer with special needs easy entry and exit in the shower zone but offers privacy during the showering experience. This independence gives the consumer a sense of control and self respect during this private process. The product line is designed with features and benefits specifically for special needs.

If a caregiver is introduced into the equation, our half height doors still provide privacy to the consumer. Ideally, it also shields the caregiver from potential misdirected spray patterns of shower heads. (We always highly recommend hand held showers for more control) As we "Age in Place" in our homes, this component of the bathroom is vital as we transition to some assisted care in our dwelling.

LCD59S	59" x 29 1/2"	Silver/Gray

premium liberty caregiver doors

This is the latest advance in shower doors for the care market. Our Premium Liberty Caregiver Doors open and close with "One Touch Technology". We have a unique "Air Assisted Hinge" operated by a small conveniently located lever, which automatically lifts the doors clear of the floor surface when actuated. Once closed, a gentle push down secures the door in a positive lock closed position and provides a strong seal on the floor.

Utilizes a unique air assisted lever spring mechanism for a "rise and fall" door that is effortlessly controlled as you push the door open or closed.

Depress the lever to raise the door off the floor.

A quick press on the hand grip returns the door to the floor and secures it into position.

The flexible bi-fold alcove doors swing 360 degrees, allowing the doors to open "in" or open "out" depending on what works for you in the shower zone.

Multi-blade squeegee rubber seal along the bottom of the doors offers a strong positive seal on floor to minimize water seepage.

fusion wet room panels

Fusion Wet Room Panels provide a luxurious finish to any wet room.

A wide diameter pole offers an ergonomic gripping system allowing practical support and ease of entry and exit in the shower zone.

Floor to ceiling support constructed of polished aluminum.

Base system is suitable with any of our wetroom floor systems.

The Fusion Wet Room Panels were designed to bring an understated feel of luxury while providing practical support and assistance in entering and exiting the shower zone. This is a unique approach to shower door panels and universal design.

We have taken typical shower panels and changed the dynamics of the system by introducing a rounded floor-to-ceiling telescopic pole that has an extra wide diameter for hand gripping assistance. This ergonomic accent simply gives the consumer a tool for gripping that will allow them easier entry into the shower and an increased feeling of security.

Our systems were designed with wet rooms specifically in mind. The top of the height adjustable telescopic pole is structurally attached to the ceiling while the base of the same pole is epoxied to the wet room floor. Most shower panel systems break the wet room seal when the base is affixed to the floor by driving screws into the floor. Our epoxy system avoids breaking the wet room seal.
