fusion shower pan 
european wet room

what is a wet room?

The European Wet Room is a curb less shower for bathrooms both residentially, commercially and institutionally. It removes the shower curb, the obstruction between the bathroom floor and the shower zone, producing a barrier free shower threshold. It is unique in the sense that it opens up a room, making the whole space ergonomic just by blending the floor space together as one. European wet rooms are more functional as a space but dramatically change the dynamic of the room, allowing you to go in many new directions with Universal Design concepts not available to most traditional American bathrooms.

Our European Wet Room is a manufactured system that offers predictability and reliability to the construction process. There are two components to a European Wet Room system; a shower pan and a waterproofing kit. The first component is our load bearing shower pan that comes in different sizes and can accommodate any shower footprint. The shower pan can be placed in wood frame construction or any concrete application. The second component, the waterproofing kit is a liquid membrane applied in conjunction with our crack isolation tape to the shower walls and bathroom floor. This waterproof membrane tanks the room, making the room impervious to water much like a fishbowl; hence the title of European Wet Room.

The wet room has been utilized in Europe for over 30 years and there are hundreds of thousands of installations globally. The technology is established, it time tested in the field, and the end result is that they just work. It was originally a "Universal Design" concept utilized for the physically challenged but has grown into a lifestyle movement for "Design for All".

universal features for the fusion pans

- Fusion Shower Pans are available in many sizes
- Fusion Shower Pans can accommodate any shower area; large or small
- Our shower pans support large and small format tile options. Vinyl flooring is also an option on most models
- Fusion Shower Pans are extremely durable and rigid; load bearing up to at least 550 pounds
- Our Wetroom Systems can be utilized in residential, commercial and institutional projects, remodeling or new construction
- The shower pan can be installed on wood joists, on subfloors, in concrete, and on concrete
- Our Wetroom System comes with liquid waterproof membrane, crack isolation tape, and the appropriate drain

standard fusion shower pan

The Standard Fusion Shower Pan is the major component of the European Wet Room, the key building block for curb-less showers allowing you to use small and large format tiles. This construction system offers a predictable and reliable wet room, making old labor intensive artisan processes obsolete.

Universal Design has finally come of age. The marriage of a wet room with today's tile choices has produced the first truly fashionable and accessible bathroom for luxury, aging in place and the physically challenged. The ability to use large and small format tiles opens up limitless possibilities for shower design.

- Formed from GRP (Glass Reinforced Plastic) and has a solid core. It is extremely tough and rigid; load bearing up to 550 pounds
- 7/8" thick (at the perimeter) and has four pitch planes with built in gradients / slope to assure efficient positive flow of the water towards the drain
- Utilizes an offset drain which allows you to position our pan so as not to interfere with existing joists
- Installs on wood joists, on subfloor, in concrete or on concrete
- Can be trimmed in the field up to two inches around the perimeter.
- Can be rotated 180° to avoid a joist or align closer to existing plumbing
- Can accommodate large and small format tiles or vinyl floor cover

Available Sizes

adjustable fusion shower pan

The Adjustable Fusion Pan just made European Wet Room installations even easier. The location of joists within wood floors no longer presents a problem, as the Adjustable Fusion Pan includes a revolutionary adjustable wheel allowing the installer to rotate the drainage point 360° to any position in order to avoid the joist. Simply place the Adjustable Fusion Pan where it will be installed and if the drain position interferes with a joist, just rotate the adjustable wheel until the drain is clear of any joists.

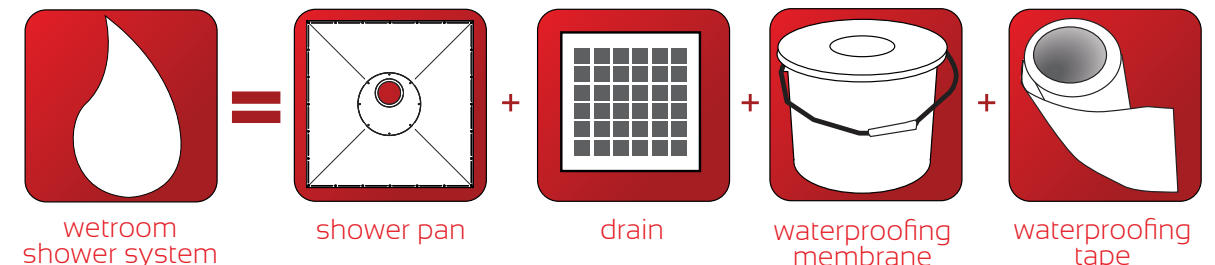

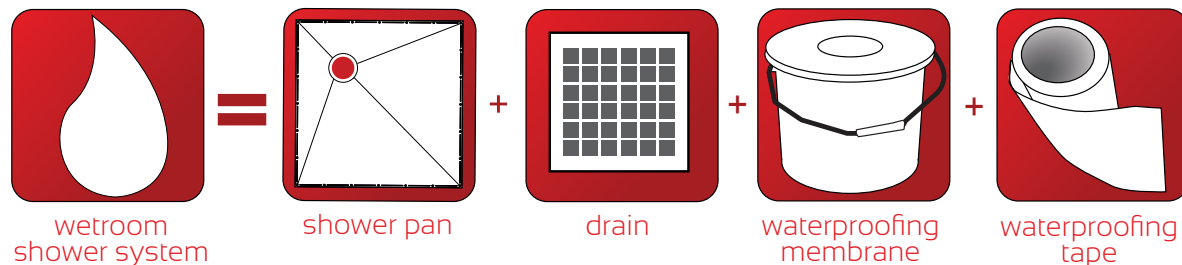

features

- Formed from compression molding from high glass content SMC and has a webbed core. It is extremely tough and rigid; load bearing up to 660 pounds
- 7/8" thick (at the perimeter) and has four pitch planes with built in gradients / slope to assure efficient positive flow of the water towards the drain
- Utilizes a unique drain allowing the installer to avoid joists in most circumstances by rotating the adjustable wheel and repositioning the drain
- Installs on wood joists, on subfloor, in concrete or on concrete
- Can be trimmed in the field
- Can accommodate large and small format tiles or vinyl floor cover

transitional linear drain fusion pan

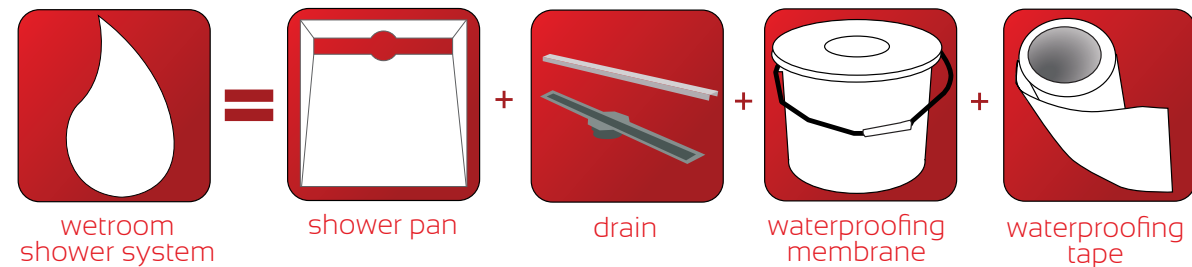

This is another unique geometric element for Universal Design. The Transitional Linear Drain Fusion Pan adds a new rectangular design for a clean simple sleek look, adding a new design option to your bathroom floor. We have taken the popular linear drain and married the concept to our Fusion Pan system. The finished product offers a unique multi crease accent in the floor of four gentle pitched planes towards the drain. This construction system is a predictable and reliable construction process that replaces old labor intensive artisan processes.

features

- Formed from GRP (Glass Reinforced Plastic) and has a solid core. It is extremely tough and rigid; load bearing up to 550 pounds
- 7/8" thick (at the perimeter) and has four pitch planes with built in gradients / slope to assure efficient positive flow of the water towards the drain
- Uniquely pitched shower pan offers four gentle slopes to the drain
- Utilizes a sleek rectangular stainless steel drain that adds an architectural accent to any bathroom
- Installs on wood joists, on subfloor, in concrete or on concrete
- Can accommodate large and small format tiles
